

Published human surveys

Three survey waves. Each section uses the question and statistic from its own survey.

ESPAI 2023 and 2024 | AI researchers

When could AI solve a long-standing open math problem on its own?

Millennium problems are examples in this broader question.

Survey year	Year at 10%	Year at 50%	Year at 90%
2023	Not recovered	~2050	Not recovered
2024	2028	2053	2822

The comparable 50% date moved from about 2050 to 2053.

ESPAI averages fitted probability distributions. The 2024 item used 130 fitted responses. The 2023 item count was not recovered. Missing cells are not zero. The year 2822 is shown in full.

LEAP 2025 | Seven groups in one survey wave

Chance that AI solves or substantially helps solve a Millennium Prize Problem

Survey: 18 Aug to 15 Sep 2025. Dots show median respondent probabilities.

All four shaded subgroup rows are part of the all-expert sample. The public item has 1,022 answers for 2027 and 2030, and 1,021 for 2040.

The questions, respondent groups, and methods differ between ESPAI and LEAP.

These results do not show a steady increase in human optimism.

Results by question form

ESPAI 2023. Two question forms, two respondent subsets, one survey wave.

Question form A | 121 complete response triples

At what year would the chance be 10%, 50%, or 90%?

Question form B | 128 complete response triples

What is the chance by 2033, 2043, or 2073?

The 50% year is 2042 for form A. Form B gives 20% by 2043.

These are analyst summaries for separate respondent subsets.

Each value is the median of one coordinate from complete, numeric, monotone triples.

The published pooled 50% year is about 2050. It uses a different method.

The difference does not measure a change in the same people over time.

Public market quotes | Separate evidence

Last eligible saved quote at each cutoff. A quote can be old. Participants can include bots.

Market question and deadline	31 Dec 2023	31 Dec 2024	31 Dec 2025	7 Sep 2026
M01 AI alone before 2030	No quote	41.9% 0.2 days old	27.0% 1.1 days old	72.8% 0.3 days old
M02 AI alone before 2035	No quote	55.0% 7.7 days old	52.3% 64.0 days old	81.0% 0.1 days old
M03 AI alone before 2040	No quote	76.1% 9.6 days old	78.4% 24.0 days old	80.0% 0.1 days old
M04 AI alone before 2050	No quote	86.3% 1.0 days old	84.0% 103.1 days old	87.7% 1.6 days old
M05 AI solves end 2028	20.3% 36.7 days old	35.0% 1.8 days old	23.9% 4.9 days old	61.5% 0.3 days old
M06 Substantial AI help before 2030	No quote	43.2% 10.0 days old	46.8% 73.1 days old	63.3% 37.5 days old
M07 AI primary solver June 2025	7.0% 78.7 days old	8.2% 29.3 days old	No quote	No quote
M08 CMI confirms AI solution end 2027	No quote	29.6% 0.1 days old	27.7% 68.4 days old	49.0% 0.3 days old
M09 AI primary solver before 2032	No quote	No quote	43.9% 9.9 days old	78.1% 1.6 days old
M10 No human assistance before 2030	No quote	No quote	32.2% 67.0 days old	75.4% 1.6 days old
M11 AI alone before 2030 (clone M01)	No quote	No quote	No quote	73.4% 0.3 days old
M12 AI solves end 2028 (clone M05)	No quote	No quote	No quote	63.3% 0.3 days old
M13 Verified AI assisted solution end 2026	No quote	No quote	2.0% 7.9 days old	16.0% 0.1 days old

M01 to M04 share the saved AI-alone wording. Each row is a different deadline question.

The other rows use different rules. M11 and M12 are clones of M01 and M05.

No quote means no eligible observation was recovered at that cutoff. It does not mean 0%.

Historical rule edits are not fully recoverable. Exact trade dates and rule notes are in the saved data.
