

Forecasts of AI solving a major open mathematical problem

Expanded evidence: 3 survey waves + public market histories · red = earlier, blue = later

Published surveys · 9 respondent-group series

Crowd markets · same four deadline questions

Separate markets can disagree: the 2026 curve has a small reversal.
Quotes are preserved; no monotonic correction is applied.
Market participants may include bots; these are not survey waves.

Survey definitions differ: ESPAI asks for autonomous solutions to long-standing open problems; LEAP allows substantial AI assistance.
Markers are observed values. Joins are visual guides; single observations are not extended. The ESPAI 2024 90% date (2822) is outside the view.
