

AI helps solve at least one Millennium Problem

A complete solution with a substantive AI contribution · Forecasts by checkpoint

One untuned curve per checkpoint. Dotted curves use matched local BF16 base/adaptor inference; controls are auxiliary.

Tuned points: median of seed medians; seeds have equal weight. Legend: valid matched draws/planned draws for each seed.

Shading: min-max across training-seed medians, not a confidence interval.

Not yet plotted (unavailable or awaiting eligible forecasts): GPT-4.

Analysis: whole-json-v1
